

Local Habitats

1). Can you search the internet for some images of Moly Quirk's Glen?

- *What can you see?
- *Are there any surprises?
- *Have you seen anything else when you have visited our glens?
- *How does the glen look different at different times of year?

2). Have a little walk around a local habitat. Perhaps you could explore a nearby glen, beach, or your own garden.

Make a note of the plants and animals that you find in the habitat. Look closely- some may be extremely small!

What plants have you found? Would that answer be different, if you explored the habitat in a different season? What differences would there be? Why?

3). Independent Activity:

Sketch a 'photograph' taken in the habitat you explored, in as much detail as possible. Be sure to show the plants and animals you found there. Can you label them?

Think about why those plants and animals grow and thrive in that particular habitat. Why is it well-suited to them?
