

Animal Adaptations

WB 11th May

So far in this Science topic you have learned all about different habitats. So you have been thinking about where animals live. Next, we are going to recap some different habitats and then think about WHY animals are suited to live there.

Habitats...

Look in the document called “Habitats” and go to pages 126-134. You will find pictures of different habitats. I would like you research the different habitats and predict what animals might live there and why.

You can find examples of answers on pages 137-154.

*** Extra fun activity on pages 155-157 “What is the Problem?” and LOTS more in this document ***

The following link will take you to a video explaining adaptation. It also has a challenge and a quiz.

Adaptations I ...

Work through the information called Adaptations I which tells you about how different animals are adapted to live in their environment.

Adaptations 2...

Adaptations 2 contains some more examples for you.

Take lots of time thinking about all of the examples and if you want to you could research your favourite animal and learn about their adaptations.

Adaptations 3...

Animal Adaptation

Adaptations 3 is full of extra learning only if you want to because you have had a lot of information already!

Activities...

- Choose your favourite animal and draw and label all of its adaptations.
- Create you own animal, maybe by merging real ones together for example a Dolphant (dolphin + elephant). Decide where it is going to live and draw and label its adaptations that make it suitable for that environment. You could also do some descriptive writing about your animal.
